

Press Reports Vietnam's PM in principal agreement of TinCom investment in Coldry

Friday 11 September 2009: Environmental Clean Technologies Limited (ASX:ESI) wishes to clarify that recent press reports, including Dow Jones Newswires, announcing that Vietnamese Prime Minister Nguyen Tan Dung has provided public, in principle, agreement to allow Thang Long Investment and Commercial Joint Stock Company (TinCom) to invest in the production of Coldry pellets in Australia, have not been confirmed to the company directly by TinCom or the Vietnamese government.

"Whilst we are confident of ultimately receiving the necessary investment approvals to move this significant project forward, the Board and I feel that shareholders must be informed of the fact that we have received no official confirmation of these statements" said ECT Chief Executive, Kos Galtos.

"We recognise the significance of these reports and are actively seeking clarification from TinCom, so we may promptly advise the ASX as soon as substantive information is received."

For further information contact Chief Executive Kos Galtos on +61 (0) 400 339 404.

Coldry Process

The world's first economic method for dewatering brown coal, creating a high energy pellet with significantly reduced CO2 emissions compared to brown coal, while being suitable for export as a black coal substitute.

Matmor Process

A one-step method for producing low-carbon iron from inexpensive, abundant brown coals and metal bearing media such as mill scale, nickel tailings and low grade iron ore.
