11 June 2010

Paranui CSG pilot expansion

Highlights

- WestSide has commenced the expansion of its Paranui coal seam gas pilot in ATP 769P
- Up to three new pilot wells will be drilled and tested with refined completion techniques

WestSide Corporation Ltd (ASX : WCL) has commenced the expansion of its Paranui coal seam gas (CSG) pilot in ATP 769P near Moura in Queensland's Bowen Basin, with the spud of the Paranui #11 appraisal well. The Paranui #11 well is the first of three appraisal wells which will aim to test gas and water flow rates from the Baralaba coal seams.

Selected coal seams in the three new appraisal wells – Paranui #11, 12 and 13 will be underreamed and cavitated before the wells are completed for testing of gas and water flows. The performance of these cavitated vertical wells will be compared to the results from the existing three Paranui pilot wells which were subjected to fracture stimulation treatments.

The wells will be located in the vicinity of the Paranui #10 core well which intersected 25 metres of net coal in 2009.

A new core well, Paranui #14 is planned to test the extent of coal to the south west of the pilot wells later in the year.

The Paranui #11 well spud on 2 June 2010 and has been drilled to its final depth of 1,035m. Coal seams are currently being underreamed.

Well	Well Type	Spud Date	Finish Date	Current Status
Paranui # 11	Appraisal	2 June 2010	17 June 2010*	Drilled to 1,035m. Pending completion of logging, underreaming and cavitation activities.
Paranui #12	Appraisal	21 June 2010*	6 July 2010*	Site preparation ongoing
Paranui #13	Appraisal	10 July 2010*	25 July 2010*	Site preparation ongoing (The drilling of this well is dependent on the results of Paranui #11 and #12)

ATP 769P coal seam gas drilling program (Paranui)

* Proposed dates

Forthcoming program

The Paranui #11 well will be logged with all coal seams to be underreamed and then cavitated.

ATP 688P coal seam gas drilling program (Mount Saint Martin and Mount Leslie)

WestSide has now completed its drilling program in ATP 688P. Six wells were drilled to test the extent of the resource previously identified in the Moranbah Coal Measures at Mount Saint Martin and a full review of the results is currently being undertaken.

The final well of the program, the Mount Leslie #8 core well targeted the gas potential of a new precinct to the south of Mount Saint Martin in ATP 688P. The Mount Leslie #8 well spud on 21 May 2010 and reached a depth of 515.3 metres on 28th May 2010 after intersecting 1.52 metres of net coal. All of the Moranbah Coal seams were heat affected at this location.

Well	Well Type	Spud Date	Finish Date	Current Status
MSM #3	Appraisal	14 Jan 2010	24 Jan 2010	Suspended for future appraisal testing.
MSM #2	Appraisal	10 Apr 2010	20 Apr 2010	Suspended for future appraisal testing.
MSM #5	Exploration Core Hole	12 Apr 2010	22 Apr 2010	Cores desorbing. Plugged and abandoned as planned.
MSM #7	Exploration	23 Apr 2010	30 Apr 2010	Plugged and abandoned as planned.
MSM #4	Appraisal	2 May 2010	10 May 2010	Suspended for future appraisal testing.
MSM #6	Exploration	13 May 2010	17 May 2010	Plugged and abandoned as planned.
Mount Leslie #8	Exploration Core Hole	21 May 2010	28 May 2010	Plugged and abandoned as planned.

Summary: ATP 688P coal seam gas drilling program 2010

About WestSide Corporation Ltd

WestSide Corporation Limited is an ASX-listed company (ASX code: WCL) with interests in coal seam gas (CSG) projects in Queensland and Indonesia.

In Queensland's Bowen Basin, WestSide is currently operating an exploration and appraisal program at the ATP 769P (Paranui) and ATP 688P (Tilbrook, Mount Saint Martin and Bald Hill) sites. WestSide holds a 50% interest in each area with QGC holding the other 50% in each case.

WestSide is currently acquiring an interest in the producing Dawson CSG fields west of Gladstone. Following completion, WestSide will operate the field and hold a 51% interest, with Mitsui holding the remaining 49%.

WestSide also has a position in the Galilee Basin (Queensland) with two new tenements (ATP 974 and 978) covering an area of over 14,000 sq kms. The Company expects to commence exploration activities in these tenements later this year, and is also assessing the CSG potential of certain coal deposits in Indonesia through its relationship with PT Bumi Resources TBK, one of Indonesia's largest coal miners.

Regular updates will be provided during the course of the drilling campaign.

Additional information is available on WestSide's website: www.westsidecorporation.com.
