

## **ASX ANNOUNCEMENT**

### **Clean Global Energy Limited (ASX:CGV): Executive Appointments**

---

- Chief Financial Officer
  - Exploration and Mining Geologist
- 

The Board of Clean Global Energy Limited [ASX:CGV] is pleased to announce the appointments of Wayne Rossiter as Chief Financial Officer and Carl D'Silva as Exploration and Mining Geologist.

Wayne Rossiter is a mining engineer and a chartered accountant with extensive experience in the mining and energy sectors. He has held senior finance and management roles in Core Mining, Sino Gold Mining, Cockatoo Coal, Roc Oil, Novus Petroleum and Bolnisi Gold.

Carl D'Silva is an exploration and mining geologist with experience in PNG, Indonesia and Australia. He has extensive experience in the Coal Seam Gas sector with focus in the last six years in the Gunnedah, Surat and Bowen Basins. Mr D'Silva has previously held roles with Santos, Chevron, Arrow Energy and Eastern Star Gas.

Commenting on the appointments, Clean Global Energy Chairman and CEO, John Harkins said:

"We are delighted to have individuals with such strong commercial, operating and technical experience and qualifications join the company.

These appointments represent an important step for Clean Global Energy in building its executive team for the delivery to market of its suite of energy solutions using Underground Coal Gasification technologies."

For further information on this announcement please contact Mr. John Harkins on +61 2 9230 0318.

Yours faithfully,

John Harkins  
Chairman/CEO  
16 June 2010

## ABOUT CLEAN GLOBAL ENERGY

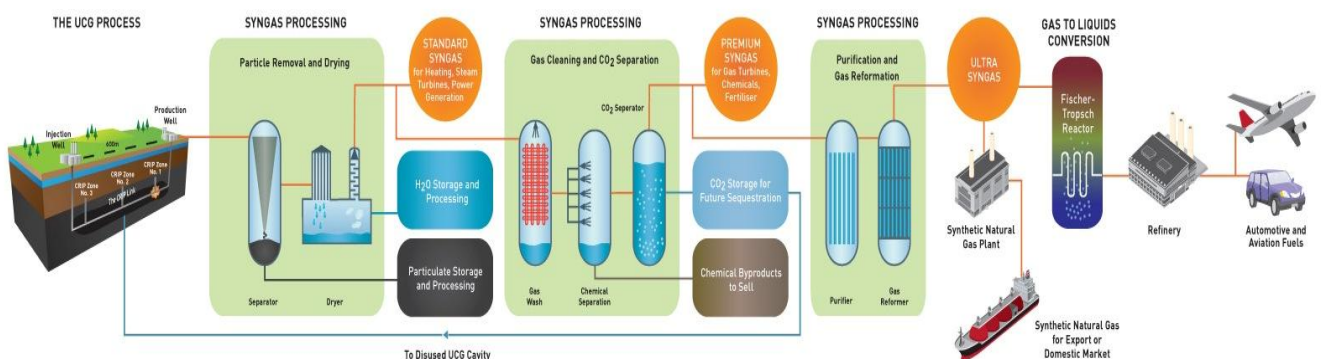

Clean Global Energy is a global energy company that can produce Syngas for use in heating, power generation and the production of chemicals, fertiliser, ultra clean diesel and aviation fuels.

Clean Global Energy uses a process called Linear CRIP Underground Coal Gasification (UCG) to produce Syngas. Here is how it works.

Clean Global Energy's advanced Linear CRIP (Controlled Retractable Injection Point) UCG process provides greater efficiencies and control with less overall operating and capital costs.

Once the raw UCG Syngas is produced at the Production Well the Syngas is passed through a number of processes to produce Regular, Premium or Ultra Syngas depending on the requirements of our clients.

### Clean Global Energy Limited

Level 8, Bligh Chambers | 25 Bligh Street | SYDNEY NSW 2000  
Phone: +61 2 9230 0318 | Fax: +61 2 9230 0319

[info@cleanglobalenergy.com.au](mailto:info@cleanglobalenergy.com.au)

Clean Global Energy's primary business focus is on providing a range of Syngas products to meet our clients needs and demands. Typical users of our Syngas are power generators, chemical, fertiliser and petroleum producers.

Clean Global Energy's "Solutions Business" partners with other companies in the development of solution packages to produce power, synthetic natural gas and ultra clean fuels. Clean Global Energy also licences its technology globally.

Clean Global Energy currently has projects in Australia and Inner Mongolia, China. Our Australian projects are focused on the development of Clean Global Energy's own extensive coal tenement portfolio into commercial income producing assets. Our US\$400million Inner Mongolia, China project is Inner Mongolia's first major UCG project which will be completed in stages over 3 years. In addition to these projects we are currently in discussions with other parties both in Australia and globally to undertake UCG projects.

Clean Global Energy is a dynamic and exciting company that is quickly growing into a major international alternate energy company. We invite you to join us on our journey.
