Key Highlights

- **New tenements secured at Mt Dimer project**
- **One exploration and one prospecting licence has been applied for north of Mt Dimer's main tenements**
- **A 22.2% increase to Mt Dimer projects land holding from 2,029 ha to 2480.5 ha;**
- **Additional sample results over M77/957, M77/958 and M77/965 are pending**

Vector Resources Ltd (ASX: VEC) ("Vector" or "the Company") is pleased to announce it has secured applications for additional land holdings to the north of tenements M77/427 and M77/428, and north west of tenements M77/957, M77/958 and M77/965 which form part of the Company's flagship Mt. Dimer project.

The increase in the Mt Dimer land holdings by 22.2% has potential for additions to the newly identified mineralization targets within the existing mining tenements. This ground will be explored with a geochemical auger program that could identify potential new areas for exploration drilling. The recently released auger results of tenements M77/427 and M77/428 show potential targets on the northern border of the tenements with the newly secured ground.

Vector Resources Chairman Damien O'Reilly said the Board were extremely pleased to secure the ground considering the amount of exploration activities currently being undertaken at Mt Dimer. The area has similar structural features to Mt Dimer and little exploration for precious metals has been carried out previously.

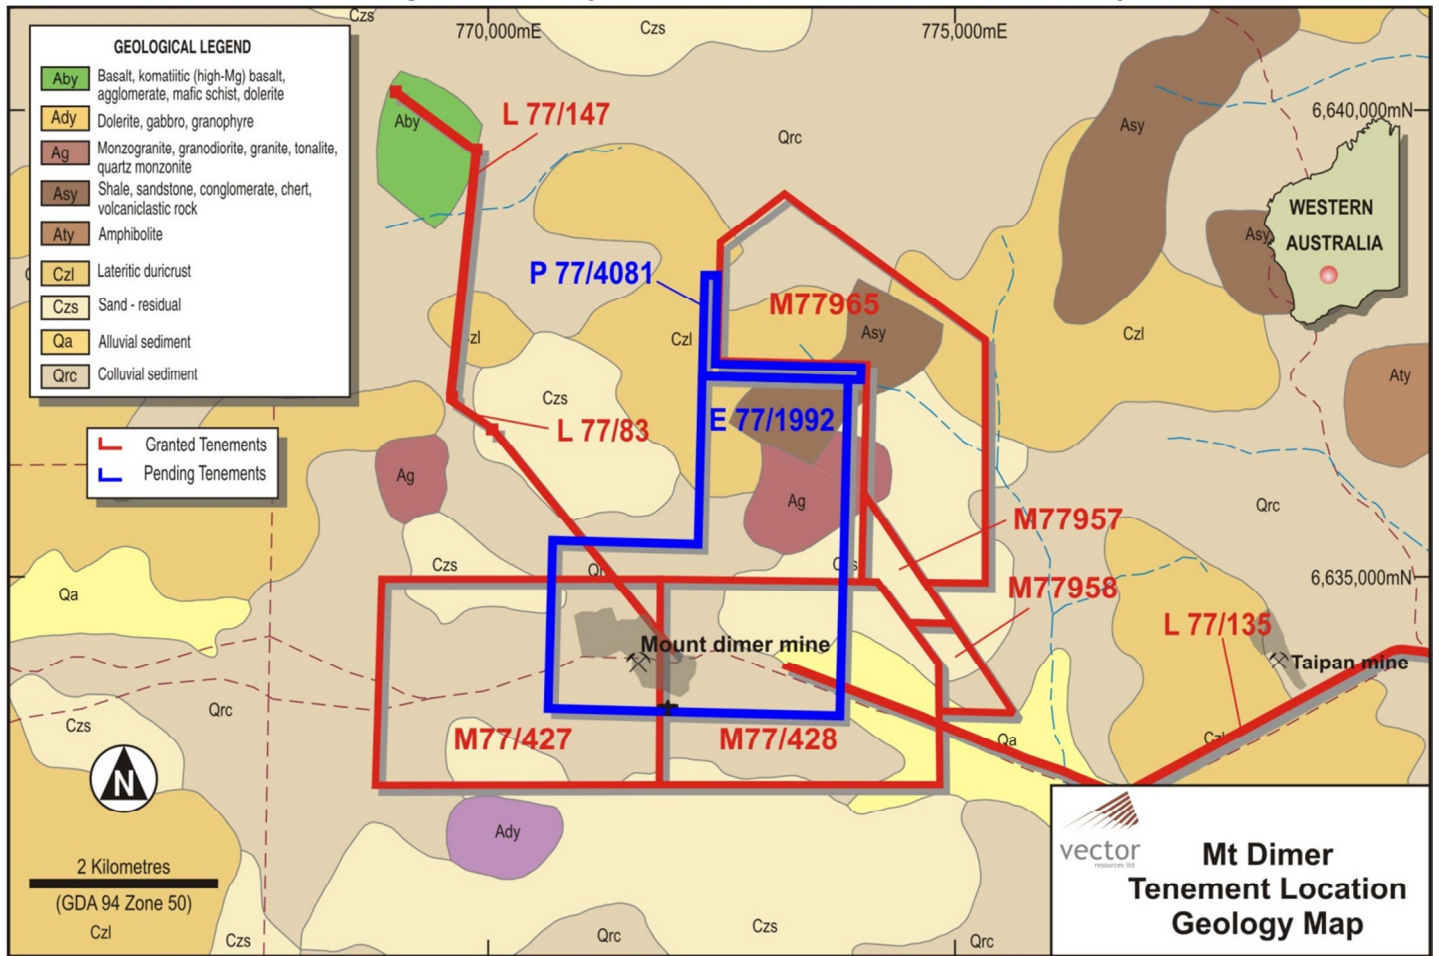

Diagram of Newly Secured Ground at the Mt Dimer Project

Significant Upside

The Mt Dimer project has significant landholdings that recently identified 17 new green field targets. The addition of this ground has encouraging fundamentals that include:

- 22.2% increase in landholdings of 451.3 ha;
- Recent geochemical survey indicates new targets at the boundary of existing and newly secured ground;
- Upon granting, the new area will systematically be explored using geochemical sampling followed by RAB and RC drill programs of identified targets;
- Area largely under explored for precious metals.

ENDS

Competent Person's Statement

Information in this report pertaining to mineral resources and exploration results was compiled by Mr P Thomas who is a member of Aus.I.M.M. Mr P Thomas has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Reserves'. Mr P Thomas consents to the inclusion in the report of the matters based on his information in the form and context which it appears.
