## 1. China CleanTech Index Overview

The China CleanTech Index provides the definitive measure of the performance of Chinese cleantech companies that are listed on stock exchanges around the world.

The cleantech industry is split into a number of sub-sectors as detailed in the table below. Each of the sub-sectors contains companies that have both environmental and economic benefits.

Biogas	Geothermal – Hot dry rocks and conventional
Biofuels	Low Emissions Transport Technologies
Carbon Trading	Solar Thermal and Photovoltaics
Energy Efficiency & Biomaterials	Waste Management & Recycling
Energy Storage & Fuel Cells	Water
Environmental Services	Wave, Tidal & Hydro
Green Buildings	Wind Generation

The cleantech sector is fundamentally different to Socially Responsible Investments (SRI) or Environmental, Social and Governance (ESG) performance. SRI and ESG look at incremental improvements in company performance and can be seen as ‘operational hygiene’ measures that find the best in class. Cleantech focuses on companies whose output positively enhances the communities and ecologies in which they reside. It is about doing ‘more good’ rather than ‘less bad’.

With 150 companies falling under the coverage of the Index and with a combined market capitalisation of nearly 800 billion Renminbi (US\$126 billion), the China CleanTech Index presents for the first time a picture of the Chinese cleantech industry’s growth in a single measure.

The Index is weighted by market capitalisation and is benchmarked against the following indices to show its relative performance:

- **Wilder Hill New Energy Global Innovation Index (NEX)** – which measures the performance of global clean energy stocks
- **Cleantech Index (CTIUS)** – which measures the performance of global cleantech stocks
- **China Shanghai Composite Index (SHCOMP)** – which measures the performance of stocks listed in Shanghai.
- **MSCI World (MSCI)** – which provides a measure of the performance of global stock markets.

The rules for the formulation and management of the Index have been developed with reference to global best practice. An overview of these rules is provided in the Index Launch report.

The China Cleantech Index is updated each month and published on the SinoCleantech website at [www.sinocleantech.com](http://www.sinocleantech.com) and on the Australian CleanTech website at [www.auscleantech.com.au](http://www.auscleantech.com.au). It is published internationally in conjunction with Cleantech Investor ([www.cleantechinvestor.com](http://www.cleantechinvestor.com)) and in China in conjunction with Top Capital ([www.topcapital.cn](http://www.topcapital.cn)).

### Index Rebalance

The China CleanTech Index underwent its quarterly rebalancing at the end of June which took account of recent share issues and other corporate activity.

There were no changes to the index constituents this quarter.

### 3. Component Sub-Indices

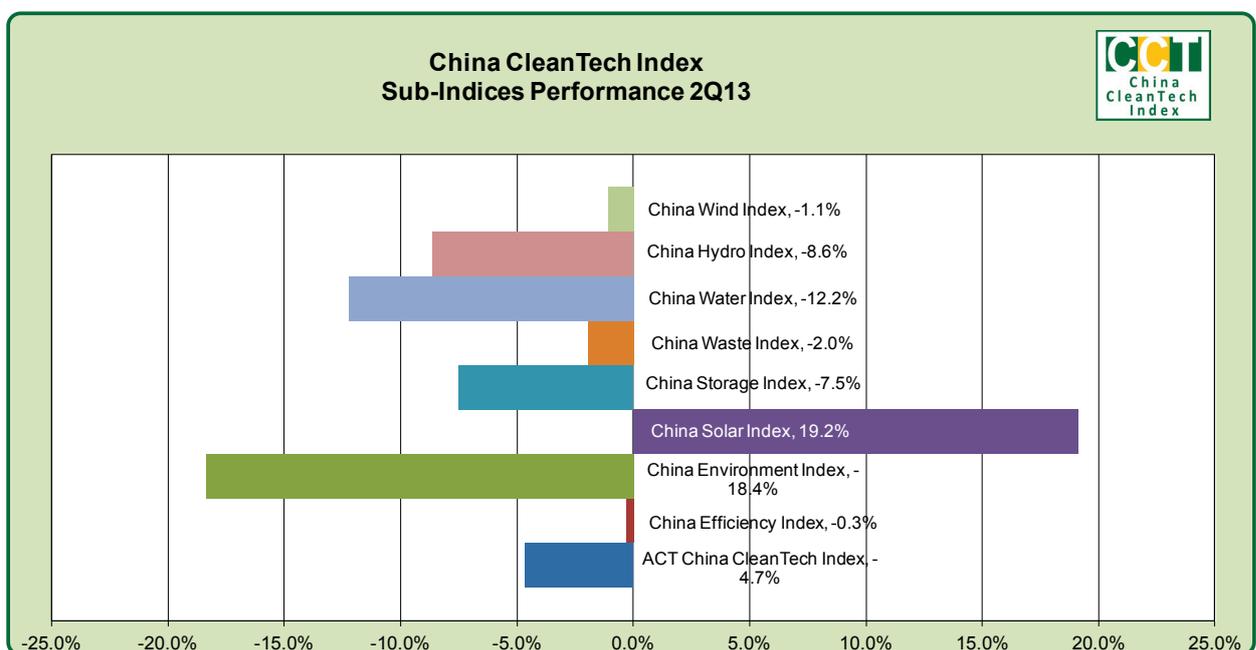

To provide an analysis of the China CleanTech Index, eight sub-indices have been developed. The performance of each of these sub-indices over the last four years is and the current quarter are shown in the table and charts below.

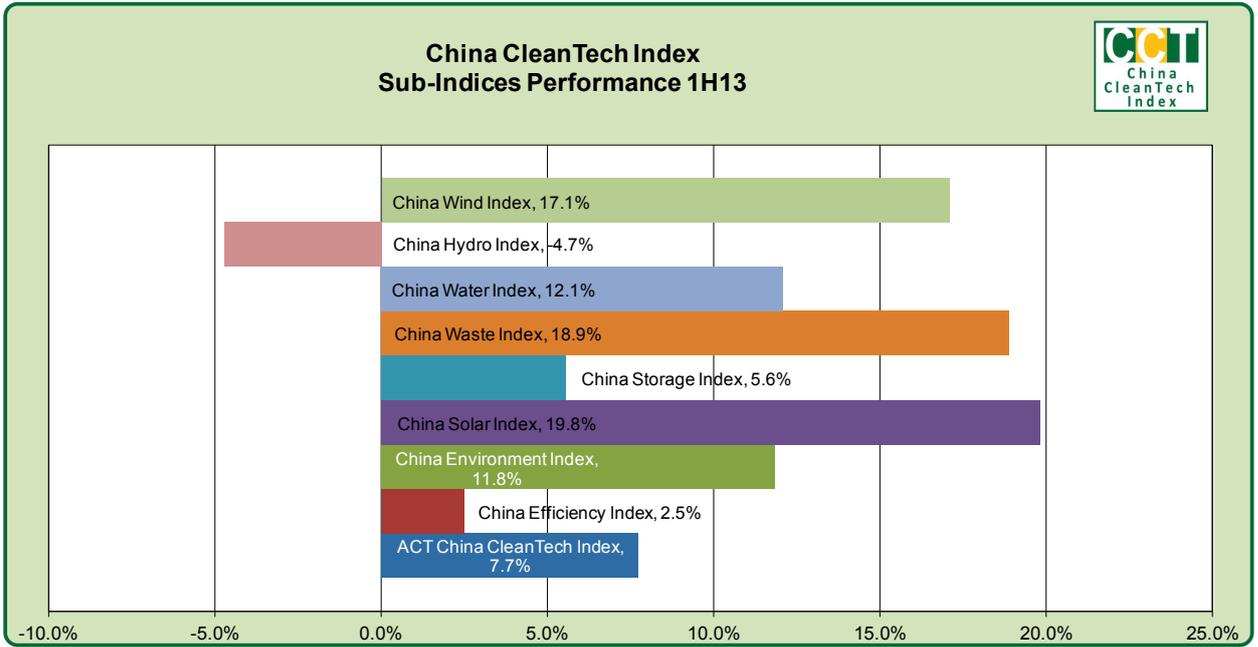

All but one of the sub-indices recorded losses for the quarter. The only sub-index that had a positive result for the three months to June 2013 was the China Solar Index that recorded a 19.2% gain. The next best result was the 0.3% loss for the China Efficiency Index. The worst performers were the China Environment Index with a loss of 18.4% and the China Water Index recording a 12.2% loss.

The story over the first half of the year has been very different. Only one of the eight indices, the China Hydro Index, recorded a loss with solid gains from the others. The best performing sectors were the China Solar Index with a 19.8% gain followed by the China Waste Index with an 18.9% gain. The worst performers were the China Hydro Index with a 4.7% loss and the China Efficiency Index with a 2.5% gain.
