

ASX: EQX | 17 October 2013 | ASX RELEASE

RAIL AND PORT ACCESS CONFIRMED FOR MAYOKO-MOUSSONDJI

HIGHLIGHTS

- Equatorial has received formal notification from the Republic of Congo Government confirming the Company's existing access agreements and the commercial framework for use of the state owned railway and port infrastructure for Mayoko-Moussondji.
- The government have confirmed:
 - The high quality iron ore planned to be produced from Mayoko-Moussondji will be exported using the existing railway and existing port at Pointe-Noire;
 - The railway and the port will remain state owned infrastructure and will continue to be made available to multiple users; and
 - Commercial terms for use of the railway and port will be applied in a consistent manner among mining companies.
- The Ministry of Transport of the Republic of Congo has confirmed that Equatorial's transport requirements for the initial 2Mtpa project are understood and has provided assurances that the state owned rail and port authorities will be able to assign available capacity for transport, storage, and ship loading.
- Confirmation of Equatorial's access to rail and port infrastructure for Mayoko-Moussondji provides a strong platform to advance discussions and negotiations with potential strategic partners and financiers. Equatorial continues to explore opportunities for collaboration and partnership in order to fast track the financing and development of Mayoko-Moussondji.

Equatorial Resources Limited ("Equatorial" or the "Company") (ASX:EQX) is pleased to announce that it has received a formal notice from the Minister of Transport of the Republic of Congo, Mr Rodolphe Adada, in relation to the planned use of state owned rail and port infrastructure servicing the Mayoko-Moussondji Iron Project ("Mayoko-Moussondji" or "the Project").

Equatorial's Managing Director and CEO, Mr John Welborn, said: "One of Mayoko-Moussondji's key advantages is the Project's access to existing railway and port facilities. The government has consistently advised Equatorial that these state owned infrastructure assets will be made available on a multi-user basis and that commercial terms will be consistently applied among companies within the mining sector. The government are fully aware of our staged development plan and the Transport Minister has confirmed that capacity will be allocated to Equatorial to enable the scale up to 2Mtpa. The strong support of the government for the Company's plans and the mining sector is very pleasing."

TRANSPORT MEETINGS

The correspondence received from Minister Adada follows a series of meetings between Equatorial's senior executive team, including representatives from WorleyParsons Services Pty Ltd, and the Republic of Congo Transport Ministry. The meetings allowed Equatorial to present the results of the completed Scoping Study (refer ASX Announcement 13 July 2013) and to define the transport infrastructure needs for Mayoko-Moussondji. The meetings included a number of workshops with both the state owned railway authority, the Chemin de Fer Congo Ocean ("CFCO") and the state owned port authority, the Port Autonome de Pointe-Noire ("PAPN"). Both the CFCO and the PAPN report directly to the Republic of Congo Transport Ministry.

MULTI-USER APPROACH CONFIRMED

Equatorial's Scoping Study investigated the potential to commence initial operations at Mayoko-Moussondji by utilising the existing railway line and exporting product through the port of Pointe-Noire. The Scoping Study also explored opportunities for synergy and efficiency through potential cooperation with Exxaro Resources Limited ("Exxaro"). Exxaro are developing the neighbouring Mayoko-Lekoumou project and have a similar staged approach to production.

The Republic of Congo Government have confirmed that the railway linking Mayoko to Pointe-Noire and the existing port facilities at Pointe-Noire will both remain state owned infrastructure. The government expects that mining companies who use these facilities, such as Equatorial and Exxaro, will be clients of the CFCO and the PAPN under terms negotiated with the Ministry of Transport and contained within the Mining Conventions that are associated with an approved Mining Licence. While the terms within a Mining Convention are specific to each particular Mining Licence, Minister Adada has confirmed in his letter that the commercial terms relating to access to the existing railway and to the existing port facilities will be consistent between mining companies.

RAIL AND PORT ACCESS AGREEMENTS CONFIRMED

The Transport Minister has confirmed that iron ore from Mayoko-Moussondji will be transported using the existing CFCO railway which links the Project to Pointe-Noire. Minister Adada has also confirmed that Equatorial will use the existing PAPN port facilities at Pointe-Noire for initial iron ore export operations. This approach is consistent with Equatorial's staged development plan for Mayoko-Moussondji and with the MOU agreements previously signed between the Company and the CFCO and the PAPN.

The formal notice confirms the Republic of Congo Government understands the needs of Equatorial's staged production plans for the Project and specifically the rail and port requirements for the Company's 2Mtpa operation. Minister Adada has provided assurances to the Company that the CFCO and the PAPN will be able to allocate available transport, storage, and ship loading capacity corresponding to Equatorial's production plans as presented to the government.

MINING LICENCE APPLICATION AND MINING CONVENTIONS

A Mining Licence Application for Mayoko-Moussondji is currently being prepared and is expected to be lodged with the government before the end of 2013. Equatorial continues to work with the Republic of Congo Government on the commercial terms for the Company's rail and port access which are expected to be finalized following granting of a Mining Licence. Further detail on infrastructure developments in the Republic of Congo will be provided by Equatorial in a Transport Infrastructure Update to be released in the coming weeks.

ABOUT EQUATORIAL RESOURCES

Equatorial Resources Limited (ASX:EQX), is focused on the exploration and development of two 100% owned potentially large-scale iron ore projects located in the politically stable and investment friendly Republic of Congo ("ROC") in the emerging global iron ore province of Central West Africa.

The **Mayoko-Moussondji Iron Project**, located in the southwest region of the ROC, currently has a Hematite Resource of 102 million tonnes at 40.6% Fe as part of initial total Indicated and Inferred Resources of 767 million tonnes at 31.9% Fe. Overall the project has an estimated global exploration target of between 2.3 and 3.9 billion tonnes¹ of iron mineralisation at a grade of 30% to 65% Fe. The project has access to a rail line running directly to the deep-water port of Pointe-Noire, where the Company's administrative office is located.

The **Badondo Iron Project**, in the northwest region of ROC, has an estimated global exploration target of between 1.3 and 2.2 billion tonnes¹ of iron mineralisation at a grade of 30% to 65% Fe. The project is located within a regional cluster of world-class iron ore exploration projects including Sundance Resources' Mbalm and Nabeba projects.

¹ Exploration Target: The estimates of exploration target sizes mentioned in this announcement should not be misunderstood or misconstrued as estimates of Mineral Resources. The potential quantity and grade of the exploration targets are conceptual in nature and there has been insufficient exploration to define a Mineral Resource in accordance with the JORC Code (2004) guidelines. Furthermore, it is uncertain if further exploration will result in the determination of a Mineral Resource.

The information in this report that relates to Exploration Results and the Scoping Study is based on information compiled by Mr Mark Glascock, who is a member of the Australasian Institute of Mining and Metallurgy. Mr Glascock is a full time employee of Equatorial Resources Limited. Mr Glascock has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Glascock consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Metallurgical Test Results is based on information compiled by Dr John Clout who is a Fellow of the Australasian Institute of Mining and Metallurgy. Dr Clout is a consultant to Equatorial Resources Limited. Dr Clout has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Clout consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to in-situ Mineral Resources is based on information compiled by Malcolm Titley of CSA Global UK Ltd. Malcolm Titley takes overall responsibility for the Report. He is a Member of the Australasian Institute of Geoscientists ('AIG') and the Australasian Institute of Mining and Metallurgy ('AusIMM') and has sufficient experience, which is relevant to the style of mineralization and type of deposit under consideration, and to the activity he is undertaking, to qualify as a Competent Person in terms of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (JORC Code 2004 Edition). Malcolm Titley consents to the inclusion of such information in this Report in the form and context in which it appears.

The information in this report that relates to Geophysical Exploration Results is based on information compiled by Mr Mathew Cooper (B.App.Sc (Geophysics) Hons.) of Core Geophysics Ltd, who was engaged by Equatorial Resources Limited to provide geophysical consulting services. Mr Cooper is a member of The Australian Institute of Geoscientists and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Cooper consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
