ASX RELEASE / MEDIA RELEASE

Fertoz receives approval for bulk phosphate sample at Wapiti East

- Permit approved for up to 7,500 tonnes of bulk sample at Wapiti East
- Wapiti East extended to include camp site and bulk storage depot at access road

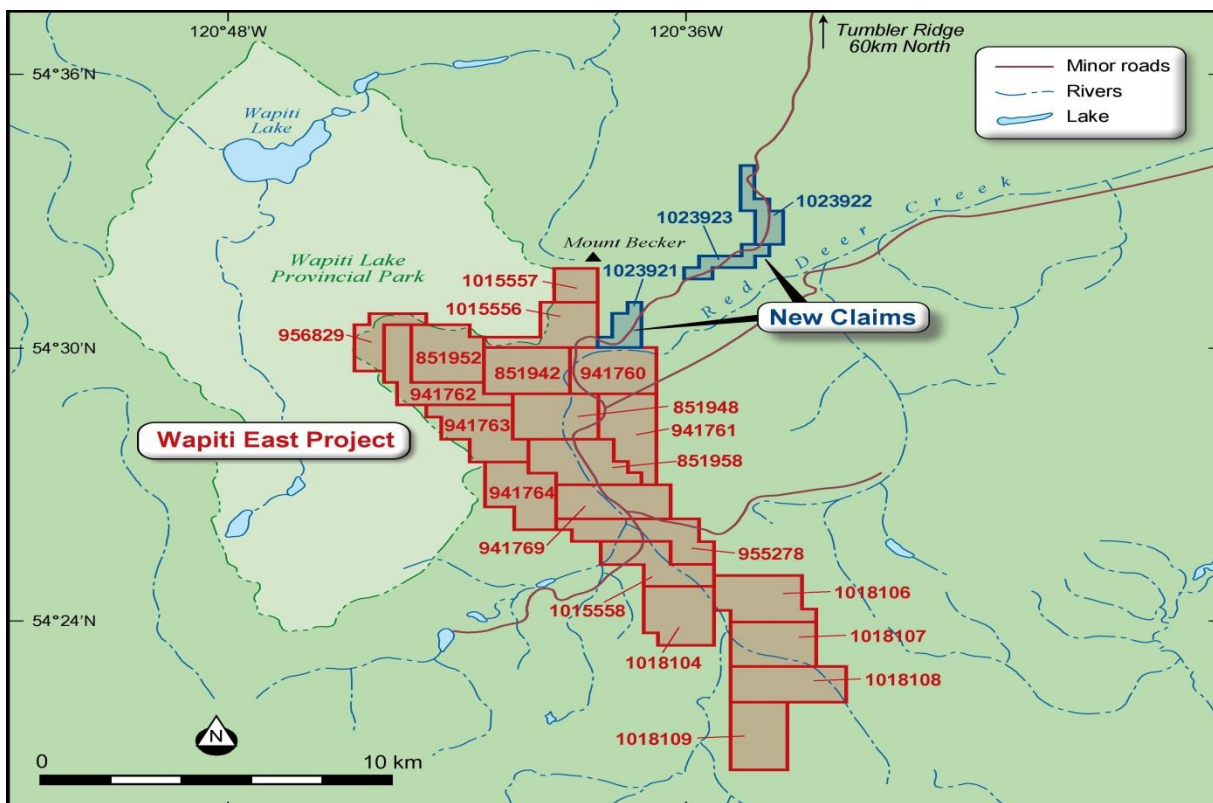

Fertoz Limited (“Fertoz” or the “Company”) is pleased to announce that the British Columbia Ministry of Energy and Mines has approved a permit to allow the Company to extract a surface bulk sample from Wapiti East of up to 7,500 tonnes of phosphate rock during the Canadian winter.

The Company will access the Wapiti East site across Red Deer Creek via an ice bridge.

Fertoz has extended its holding at Wapiti East by 506.6 hectares so that parts of the access road, the camp, and phosphate storage area are all on Company tenements. Fertoz has been granted tenements 1023921, 1023922 and 1023923.

The bulk sample is scheduled for collection in March but exact timing will be dependent on the weather.

A permit for a further bulk sample in the warmer months is also underway.

Managing Director Les Szonyi said: *“The Wapiti East project is proceeding to schedule. The next steps after the collection of the bulk sample are to commence farm trials and to continue with laboratory testing in relation to organic certification of the Wapiti rock phosphate.”*

About Fertoz

Fertoz is exploring for high grade phosphate resources in Canada and the United States of America, which are two of the largest agricultural economies in the world and which both import phosphate rock. Fertoz has five projects in Canada – Wapiti (East and West), Barnes Lake, Crows Nest and Marten – all proximate to infrastructure, and an option on one project in Idaho, USA, again proximate to infrastructure. Fertoz is targeting small, high grade resources in the Americas that can be commercialised quickly and inexpensively, with high grade product sold to organic farmers or third-party fertiliser plants.
