ASX RELEASE

ISIS Reveals First Bomber Drone; DroneShield to Host U.S. Military Detection and DroneGun Demo

- DroneShield will host demonstration of its drone detection products and the DroneGun tactical drone jammer product in March 2017 at U.S. Government military training area.
- Facilitated through the partnership with a U.S. government organisation headquartered in a U.S. Mid-Atlantic state.
- Comes as ISIS reveals a video of its remote-controlled drone dropping a bomb on Mosul, Iraq.
- The demonstration expected to attract a substantial number of U.S. and allied government agencies.

DroneShield Ltd (ASX:DRO) ("DroneShield" or the "Company") is pleased to announce that it will host a demonstration of its drone detection products and the DroneGun tactical drone jammer in March 2017 through the recently announced partnership with a U.S. government organisation headquartered in a U.S. Mid-Atlantic state. The demonstration will take place at a dedicated military training area in that state.

The demonstration will involve both drone detection and countermeasure capabilities of DroneShield's products. The event will focus solely on DroneShield products.

The demonstration comes against the backdrop of ISIS revealing on 24 January 2017, for the first time, a video of its remote-controlled drone dropping a bomb on Mosul, Iraq and mailonline.com reporting that development¹.

Footage of what is reported to be ISIS' world-first drone bomber

A substantial number of U.S. government, military and security agency representatives are expected to attend the DroneShield demonstration, along with non-U.S. allied counterparts. Additional interested parties for the demonstration may contact DroneShield to register interest in participation, subject to obtaining U.S. security clearances and other permissions to take part in the event.

DroneShield's product demonstration is expected to continue positioning DroneShield as a global leader in the drone security space.

The products that will be presented during the demonstration will include:

DroneGun	<i>Portable tactical drone jammer</i>	
Omnidirectional Sensor	<i>180 degree wide angle near-range detection</i>	
Long Range Sensor	<i>Long-range (up to 1km) drone detection with precise sector positioning (30 degree cone)</i>
