Carnarvon Project Works Approval Granted

Perth-based clean power company Enerji Limited (ASX:ERJ) has been granted works approval enabling commencement of installation on site of Australia's first Opcon Powerbox. The WA Department of Environment and Conservation (DEC) approval clears the way to commence on-site construction in Carnarvon of the waste heat to power system including the Opcon Powerbox.

Enerji's staff and contractors will be on site this week to commence construction beginning with the civil works.

"This is a watershed moment for Enerji and its shareholders as we begin construction of what we expect to be the first of many of our waste heat recovery systems," said Enerji Managing Director and CEO, Greg Pennefather.

Enerji previously advised that the first genset exhaust modifications would occur on 5 February. This first modification has been rescheduled due to the works approval having to be advertised in Monday's *The West Australian* newspaper before being released. This does not impact the project schedule.

Further construction updates, highlights and milestones will be announced in due course.

About Enerji

Enerji Limited is a Perth-based green power company focussed on commercialising the Opcon Powerbox in Australia.

The Opcon Powerbox cogeneration technology transforms waste heat into electricity and therefore creates significant energy cost savings and reduced CO2 emissions for its customers.

Enerji has exclusive sales and distribution rights for the Opcon Powerbox in Australia and options for Malaysia, Thailand, Singapore, and Sub-Saharan Africa.

The Opcon Powerbox, manufactured in Sweden by Opcon, represents a significant commercial opportunity through application to industrial, mining and power generation operations.

Enerji plans to maximise this opportunity and generate shareholder returns through long-term power purchase agreements.
