## **ASX RELEASE**

15 November 2018

### **PRIMERO WEST-1 DRILLING REPORT**

**State Gas Limited (ASX: GAS)** is pleased to advise that drilling activities at the Primero West-1 well at the Reid's Dome Gas Project (PL 231) reached the planned depth of 250 metres this morning at 7:40AM (AEST). Drilling ceased at 250.77 metres total depth.

With the completion of drilling activities, logging, testing and cementing will now be conducted at Primero West-1 over the coming days. State Gas will release a further update when the results of logging and testing are available.

As previously advised, following these activities, the Primero West-1 well will be plugged and abandoned on the basis that any full-field development of the Cattle Creek Formation within PL 231 will require additional drilling and a focused seismic program to optimise the locations of production wells.

Primero West-1 was located and designed to test the Cattle Creek Formation within PL 231 and is 100%-funded by State Gas Limited in accordance with the requirements of the Joint Venture Operating Agreement.

Following completion of activities at Primero West-1, Silver City Drilling Rig-25 will be mobilised to the Nyanda-4 site approximately 13.5 kilometres to the south within PL 231.

The Nyanda-4 well has a planned depth of 1,000 metres and is a jointly-funded well in accordance with the terms of the Joint Venture Operating Agreement. Under the terms of the Agreement, State Gas is only responsible to meet its 60% of the costs.

State Gas Limited is Sole Operator and 60% owner of the Reid's Dome Gas Project (PL-231).
