## NEW GOLD TARGET IDENTIFIED AT COBAR GOLD PROJECT

### RC DRILLING PROGRAM TO BE UNDERTAKEN IN EMERGING GOLD CAMP

#### Highlights

- Results from regional auger soil sampling have identified a new gold in soil anomaly at the Republic Prospect. The robust gold anomaly remains open to the northeast, southwest and southeast.
- Identification of the Republic Prospect confirms the geological model being targeted.
- Planning for a reverse circulation (RC) drilling program has been finalised. The program is designed to expand on recent significant gold intercepts at the Battery Tank, Good Friday, Sunrise and Boundary Prospects, and provide initial drill testing at the new Republic Prospect and other regional prospects.
- The drilling program is expected to commence once approvals have been secured.
- The 30 hole RC program will be testing the strike and dip extent of gold structures which previously returned significant gold drill results including:
  - **Battery Tank Prospect:**  
Aircore: 14m @ 2.8g/t Au and 4m @ 13.3g/t Au within 43m @ 2.3g/t Au from surface to EOH<sup>1</sup>.  
DDH: 10m @ 3.3 g/t Au (incl. 3.3m @ 5.2g/t Au) and 5m @ 2.4g/t Au within 54.5m @ 1g/t Au<sup>1</sup>.
  - **Good Friday Prospect:**  
DDH: 39m @ 2.4g/t Au (incl. 8m @ 4.9g/t Au & 7.8m @ 4.0g/t Au) within 66m @ 1.5g/t Au<sup>1</sup>.  
RC: 25m @ 25.5g/t Au and 18m @ 3.2g/t Au<sup>1</sup>.
  - **Sunrise Prospect:**  
DDH: 8m @ 3.3g/t Au (incl. 3m @ 6.1g/t Au), 2m @ 3.5 g/t Au, 7m @ 1.3g/t Au and 7m @ 1.2g/t Au within 88m @ 0.7g/t Au<sup>1</sup>.  
RC: 11m @ 3.5g/t Au within 28m @ 2.3g/t Au and 13m @ 4.2g/t Au<sup>1</sup>.
  - **Boundary Prospect:**  
DDH: 5m @ 9.3g/t Au, 11.4m @ 5.1g/t Au within 45m @ 3.4g/t Au<sup>1</sup>.  
RC: 15m @ 2.3g/t Au within 70m @ 1.1g/t Au and 5m @ 2.7g/t Au<sup>1</sup>.
- A new geological model and structural interpretation is driving the recent and planned exploration programs and these exploration results highlight the potential for further identification of linkage between prospects and additional gold mineralisation throughout this prospective and emerging gold camp.

Helix Resources Limited (ASX:HLX) is pleased to provide an update regarding its exploration activities at the Cobar Gold Project in NSW.

### Cobar Gold Project

The Cobar Gold Project is located approximately 40km southeast of the mining hub of Cobar in Central NSW. Helix's 750km<sup>2</sup> of tenements cover an entire goldfield hosted in a regionally significant anticline, where northwest regional trends appear to control gold-bearing structures in highly altered sediments. Gold mineralisation was targeted by a series of historic shafts and pits when the area was mined in the late 1800's. The goldfield was only abandoned due to a lack of water to process the gold ore at the time. The goldfield has small historic gold workings scattered over a 13km x 5km area, demonstrating the potentially extensive gold mineralised systems present in the area. The area has had only limited drilling to a maximum depth of 120m from surface at four of the prospects (**Battery Tank, Good Friday, Sunrise and Boundary**).

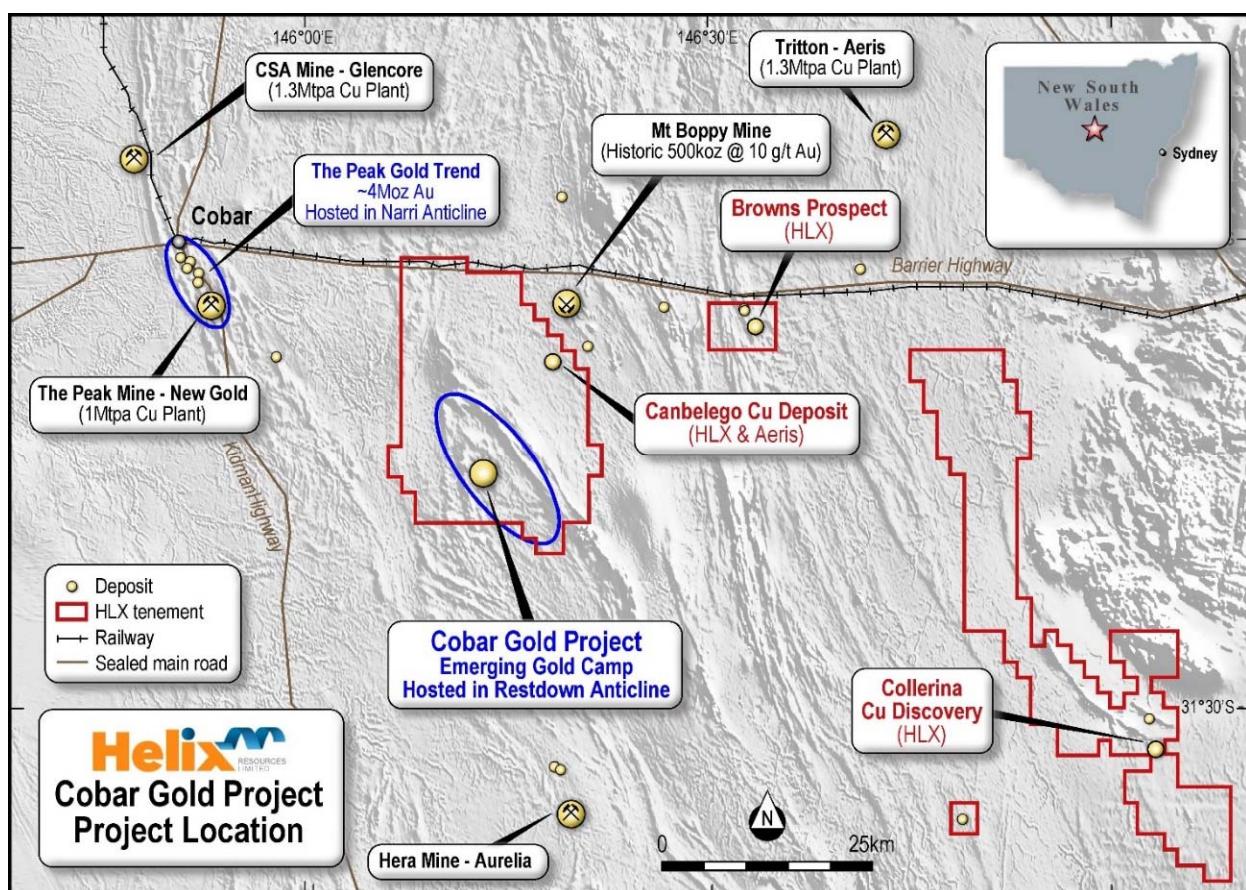

Figure 1: Location of the Cobar Gold Project which has a similar geological and structural setting to the Peak Gold Trend and also showing the wider district with several nearby long-life operations and significant new discoveries; including Helix's Collerina Copper Project.

### Republic Prospect - New Gold Geochemical Anomaly

Helix recently carried out soil auger sampling on a 20m x 20m soil grid, using the Company's hydraulic auger rig at the Republic Prospect, a priority target area approximately three kilometres northwest of the four known prospects.

The Republic Prospect sits on a regionally significant northsouth structure, intersected by northwest lineaments and local northeast sub-structures (refer figure 2). The area has historic trenching, dry-blowing piles and an abandoned mine shaft nearby.

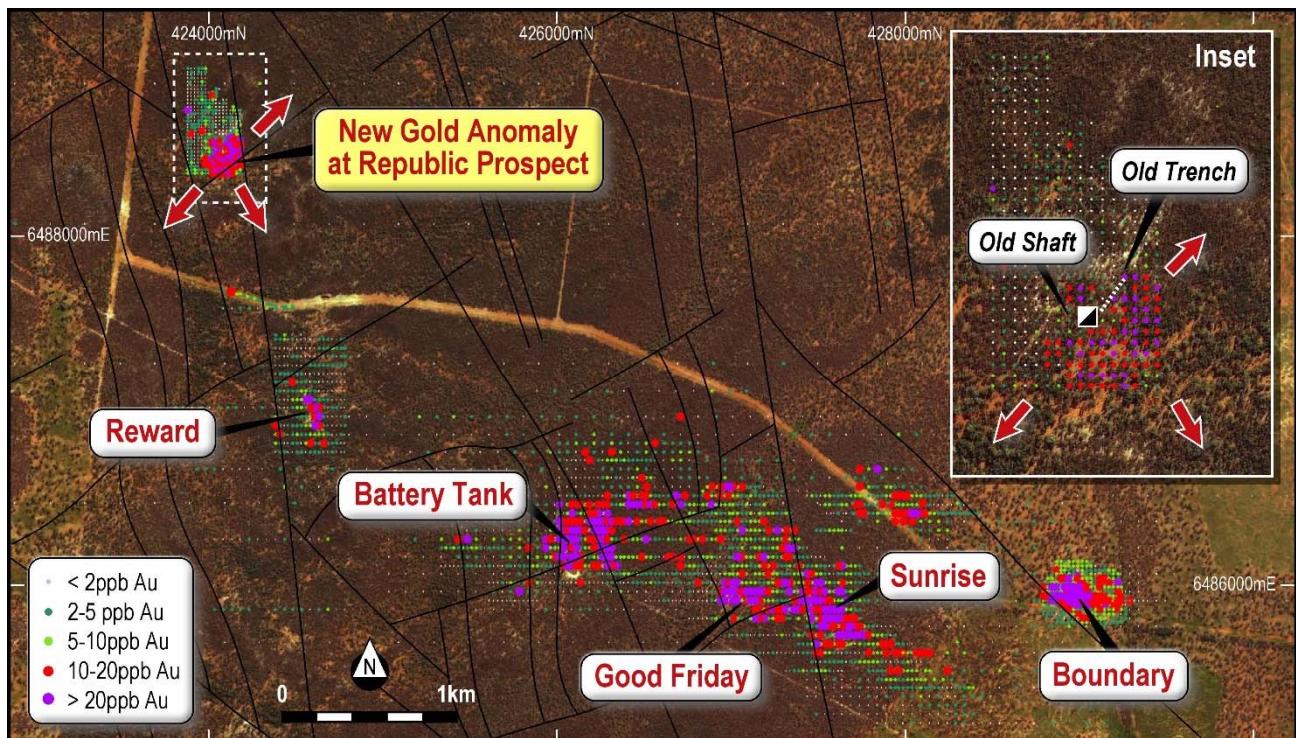

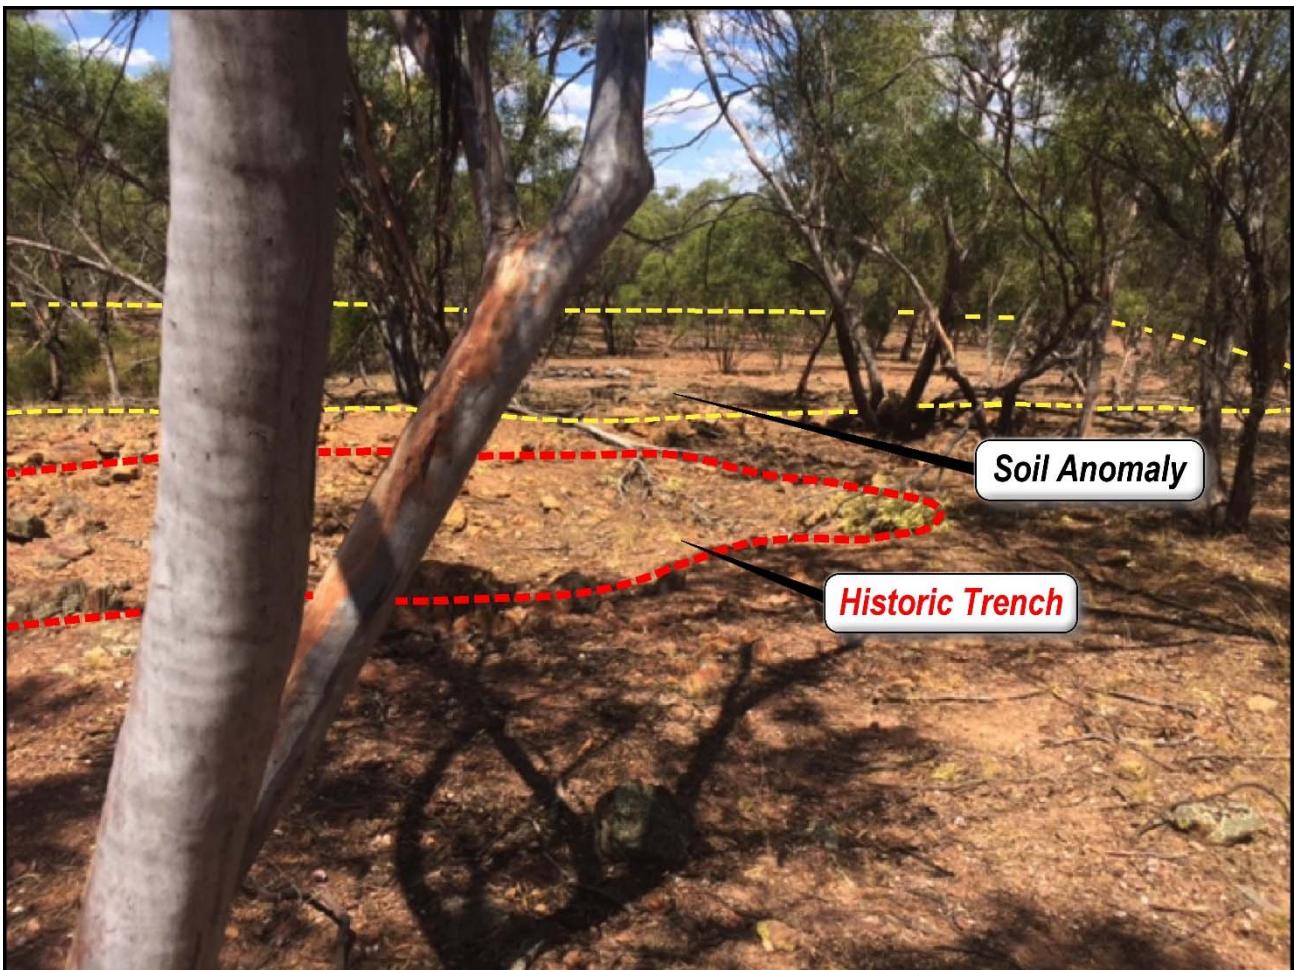

Figure 2: Soil coverage showing new Republic Prospect area, inset shows potential extensions to target zone

The geochemical survey has identified a robust gold in soil anomaly in the targeted area. A total of 421 samples were collected, with assays highlighting a coherent greater than 10ppb gold in soil anomaly peaking at 138ppb gold with coincident pathfinder element anomalism also present. Higher tenor results (>20ppb gold) follow a northeasterly trend within the broader anomaly. *Note: Background gold anomalism in this area is less than 1ppb gold.*

The gold in soil anomaly is located in an open woodland, abutting, then continuing southeast of the historic gold workings. The bedrock in this area is completely untested and is a priority target in the upcoming regional drilling planned on the project.

The new geological and structural interpretation provides scope for potential linkage between the known prospects, both along strike and under shallow cover in drainage channels. Consequently, additional soil sampling will be conducted northeast, southwest and southeast of the Republic Prospect anomaly to cover the full extent of the target zone as well as target other areas identified in the regional structural review.

*Photo 1: Historic trench in foreground, Republic Prospect soil anomaly is located south east of the workings.*

#### Existing Prospects – Planned Drilling

In addition, Helix has finalised plans for further RC drilling at Battery Tank, Good Friday, Sunrise and Boundary. Helix plans to drill 6-8 RC holes at each prospect targeting dip and strike extensions of the recently identified northeast high grade gold mineralised structures. Drilling will commence upon receipt of statutory approvals.

Drilling will be targeting extensions around the previously reported significant gold results including:

- **Battery Tank Prospect:**  
Aircore: **14m @ 2.8g/t Au and 4m @ 13.3g/t Au** within 43m @ 2.3g/t Au from surface to EOH<sup>1</sup>.  
DDH: **10m @ 3.3 g/t Au (incl. 3.3m @ 5.2g/t Au)** and 5m @ 2.4g/t Au within 54.5m @ 1g/t Au<sup>1</sup>.
- **Good Friday Prospect:**  
DDH: **39m @ 2.4g/t Au (incl. 8m @ 4.9g/t Au), 7.8m @ 4.0g/t Au** within 66m @ 1.5g/t Au<sup>1</sup>.  
RC: **25m @ 25.5g/t Au** and 18m @ 3.2g/t Au<sup>1</sup>.

▪ **Sunrise Prospect:**

DDH: **8m @ 3.3g/t Au (incl. 3m @ 6.1g/t Au)**, 2m @ 3.5 g/t Au, 7m @ 1.3g/t Au and 7m @ 1.2g/t Au within 88m @ 0.7g/t Au<sup>1</sup>.

RC: **11m @ 3.5g/t Au** within 28m @ 2.3g/t Au and **13m @ 4.2g/t Au<sup>1</sup>**.

▪ **Boundary Prospect:**

DDH: **5m @ 9.3g/t Au, 11.4m @ 5.1g/t Au** within 45m @ 3.4g/t Au<sup>1</sup>.

RC: **15m @ 2.3g/t Au** within 70m @ 1.1g/t Au and 5m @ 2.7g/t Au<sup>1</sup>.

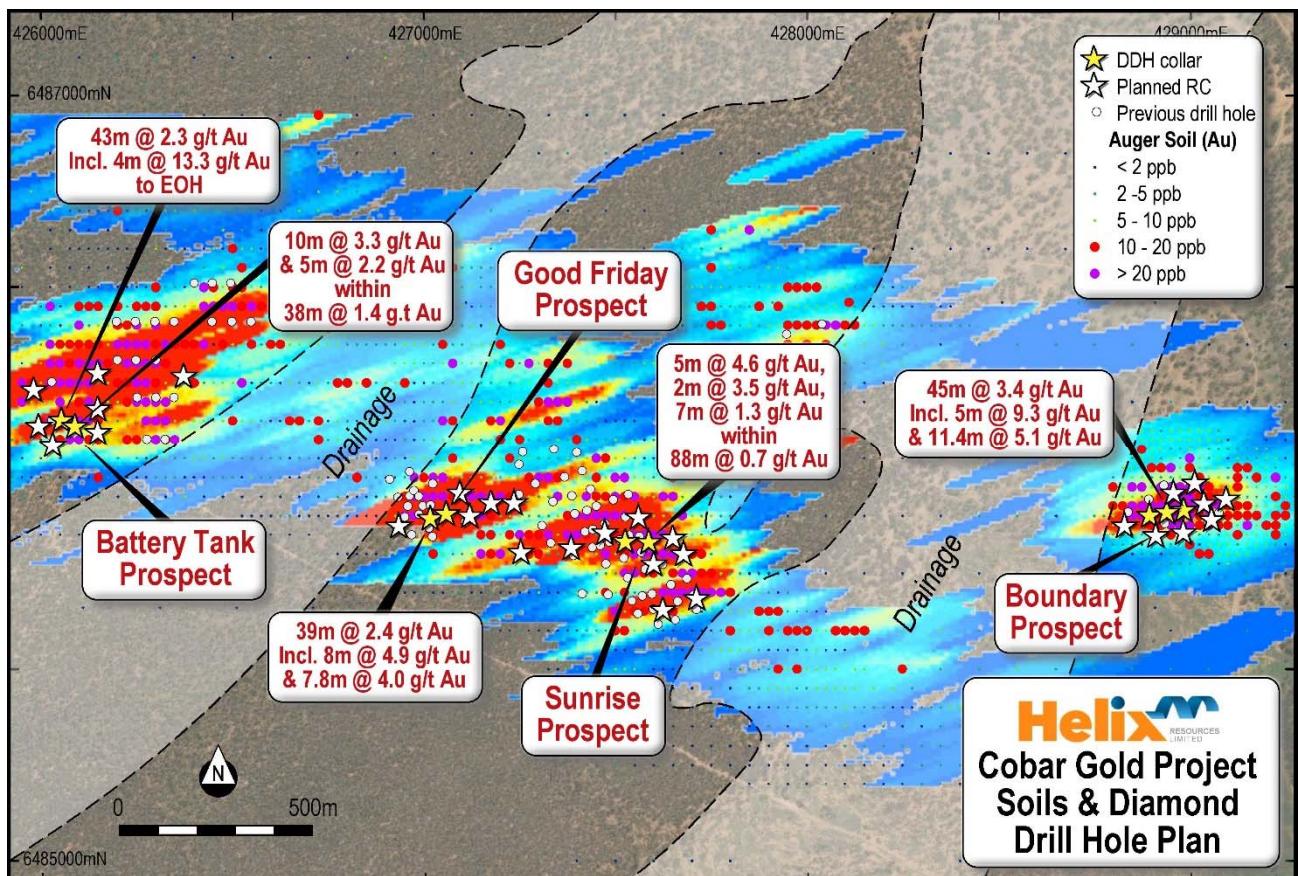

Figure 3: RC drilling will test northeast structures with 6-8 holes per prospect (white stars).

### **Competent Persons Statement**

The information in this announcement that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr M Wilson who is a full time employee of Helix Resources Limited and a Member of The Australasian Institute of Mining and Metallurgy. Mr M Wilson has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr M Wilson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Details of the assumptions underlying any Resource estimations are contained in previous ASX releases or at [www.helix.net.au](http://www.helix.net.au)

<sup>1</sup> For full details of exploration results refer to ASX announcement dated 7 April 2011, 17 November 2016, 3 April 2017 and 26 April 2017. Helix Resources is not aware of any new information or data that materially effects the information in this announcement.

## JORC Code – Table 1

### Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>• <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i></li> <li>• <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></li> <li>• <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></li> <li>• <i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></li> </ul>	<ul style="list-style-type: none"> <li>• The Cobar Gold Project auger soil sampling was completed using the Company’s hydraulic soil auger rig. All samples were taken from verticle holes and sampled the rocj/soil interface.</li> <li>• The soil locations were located by handheld GPS.</li> <li>• Samples were collected, dried and pulverized to produce a representative charge with samples assayed for gold and selected base metals.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>• Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling was completed.</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>• Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>• Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>• Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling was completed.</li> </ul>

Criteria	JORC Code explanation	Commentary
<b>Logging</b>	<ul style="list-style-type: none"> <li><i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></li> <li><i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i></li> <li><i>The total length and percentage of the relevant intersections logged.</i></li> </ul>	<ul style="list-style-type: none"> <li>All sample locations had a representative sample of material collected retained in a chip tray for each hole and are held at the Companies storage facility.</li> <li>Logging of core was completed with lithology, alteration, degree of oxidation, fabric and colour being recorded.</li> <li>All holes were logged in full.</li> </ul>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li><i>If core, whether cut or sawn and whether quarter, half or all core taken.</i></li> <li><i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i></li> <li><i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i></li> <li><i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i></li> <li><i>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</i></li> <li><i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i></li> </ul>	<ul style="list-style-type: none"> <li>The preparation of samples follows industry practice. This involves oven drying, pulverization of total sample using LM5 mills until 85% passes 75 micron.</li> <li>Field QA_QC involved repeat sampling and the laboratories standard QA_QC procedures. The sample sizes are considered appropriate to the grain size of the material being sampled. Repeatability of assays was good.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li><i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i></li> <li><i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i></li> <li><i>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</i></li> </ul>	<ul style="list-style-type: none"> <li>All assays were conducted at accredited assay laboratory. The analytical technique used for Gold via the Aqua Regia method.</li> <li>Laboratory QA/QC samples involving the use of blanks, duplicates, standards (certified reference materials), replicates as part of in-house procedures.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li><i>The verification of significant intersections by either independent or alternative company personnel.</i></li> <li><i>The use of twinned holes.</i></li> </ul>	<ul style="list-style-type: none"> <li>Results have been verified by Company management.</li> <li>This assay data received from the laboratory and subsequent survey data were entered into a secure Access databases and verified.</li> </ul>

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>Specification of the grid system used.</li> <li>Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>The sample positions were picked-up using GPS.</li> <li>Grid system is GDA94 Zone 55.</li> <li>Surface RL data collected using GPS. Topography around the drilled area is a slight slope grading from Grid West to drainage southeast. Variation in topography is less than 5m across the drilled area.</li> </ul>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration Results.</li> <li>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>Whether sample compositing has been applied.</li> </ul>	<ul style="list-style-type: none"> <li>Soil sampling at the Cobar Gold Project were targeting gold prospectivity at the Republic Prospect (refer Figure 2).</li> <li>No drilling completed.</li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>No orientation based sampling bias has been identified in the data to date.</li> </ul>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>Chain of Custody is managed by the Company. The samples were freighted directly to the laboratory with appropriate documentation listing sample numbers intervals to cut and analytical methods requested.</li> </ul>
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>The results of any audits or reviews of sampling techniques and data.</li> </ul>	<ul style="list-style-type: none"> <li>No additional QA/QC has been conducted for the sampling to date.</li> </ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li><i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></li> <li><i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></li> </ul>	<ul style="list-style-type: none"> <li>The Cobar Gold Project is located on EL6140, a JV between Helix 70% and manager and 30% Glencore (diluting). The tenement is in good standing, with a renewal submitted in October 2016. There are no known impediments to operating in this area.</li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li><i>Acknowledgment and appraisal of exploration by other parties.</i></li> </ul>	<ul style="list-style-type: none"> <li>Previous modern exploration on the Cobar Gold Project was limited set-depth 20m open hammer holes drilled by CRA in the 1970's with follow-up work by Glencore in the mid 2000's. Historic shafts and pits are present throughout the area, which date back to small scale mining activities in the early 1900's.</li> </ul>
<b>Geology</b>	<ul style="list-style-type: none"> <li><i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>The prospect is considered to be sediment hosted mesothermal to epithermal style gold.</li> </ul>
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li><i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i></li> <li><i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></li> </ul>	<ul style="list-style-type: none"> <li>Refer to table 1 in the body of the text</li> <li>No material information was excluded from the results listed</li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li><i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i></li> <li><i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></li> <li><i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></li> </ul>	<ul style="list-style-type: none"> <li>Intervals reported are based on a 0.1g/t Au Cut-off grade with a maximum of 6m of internal dilution</li> <li>No weighting has been used</li> <li>No metal equivalent results were reported.</li> </ul>

Criteria	JORC Code explanation	Commentary
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>These relationships are particularly important in the reporting of Exploration Results.</li> <li>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</li> </ul>	<ul style="list-style-type: none"> <li>The program was designed to a new area for possible gold mineralisation.</li> <li>Results are reported as received</li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	<ul style="list-style-type: none"> <li>Refer Figure 2-3 in the main body.</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>Refer to Table 1</li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	<ul style="list-style-type: none"> <li>Previously reported activities Refer to ASX announcements on <a href="http://www.helix.net.au">www.helix.net.au</a> for details</li> </ul>
<b>Further work</b>	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> <li>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li> </ul>	<ul style="list-style-type: none"> <li>Based on these highly encouraging results so far, additional soil sampling and drilling is considered imperative to further assess the potential at various Prospects on the Cobar Gold Project.</li> </ul>
