Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, gold and other metals price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any “forward-looking statement”.

The Presentation contains general background information about the Company and its activities current as at the date of this presentation. The information in this Presentation is in summary form only and does not contain all the information necessary to fully evaluate any transaction or investment. It should be read in conjunction with the Company’s other periodic and continuous disclosure announcements lodged with the ASX, which are available at www.asx.com.au and other publicly available information on the Company’s website at www.whiterockminerals.com.au.

The information in this Presentation that relates to Exploration Results is based on information compiled by Mr Rohan Worland who is a Member of the Australian Institute of Geoscientists. Mr Worland is engaged by White Rock Minerals Ltd as a technical consultant. Mr Worland has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’. The Exploration Potential described in this Presentation is conceptual in nature, and there is insufficient information to establish whether further exploration will result in the determination of a Mineral Resource. Mr Worland consents to the inclusion in this Presentation of the matters based on his information in the form and context in which it appears.

At the Mt Carrington Project the gold dominant Mineral Resources have been estimated using a cut-off of 0.5g/t Au except Red Rock, which uses a cut-off of 0.7g/t Au. All silver dominant Mineral Resources have been estimated using a cut-off of 25g/t Ag. The Strauss and Kylo Mineral Resource was prepared and reported in accordance with the JORC Code (2012) as per the ASX Announcement on 9 October 2017. The Red Rock, Guy Bell, Lady Hampden, White Rock, White Rock North and Silver King Mineral Resource was prepared and reported in accordance with the JORC Code (2004) as per ASX Announcements by White Rock Minerals Ltd on 13 February 2012, 11 July 2013 and 20 November 2013, and the ASX Announcement by Rex Minerals Ltd on 10 December 2008. The Resources figures have not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

The pit optimisation study used a Mineral Resource made up of a combination of Indicated and Inferred Resource blocks. There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the production target itself will be realised.

The Mt Carrington Ore Reserve information was prepared and first disclosed under the JORC Code (2012) as per the ASX Announcement by White Rock Minerals Ltd on 27th December 2017.

The Red Mountain Mineral Resource information was prepared and first disclosed under the JORC Code (2012) as per the ASX Announcement by White Rock Minerals Ltd on 26th April 2017.

Zinc equivalent grades are estimated using long-term broker consensus estimates compiled by RFC Ambrian as at 20 March 2017 adjusted for recoveries derived from historical metallurgical testing work and calculated with the formula: $ZnEq = 100 \times [(Zn\% \times 2,206.7 \times 0.9) + (Pb\% \times 1,922 \times 0.75) + (Cu\% \times 6,274 \times 0.70) + (Ag \text{ g/t} \times (19.68/31.1035) \times 0.70) + (Au \text{ g/t} \times (1,227/31.1035) \times 0.80)] / (2,206.7 \times 0.9)$. White Rock is of the opinion that all elements included in the metal equivalent calculation have reasonable potential to be recovered and sold.

This announcement contains references to exploration results, Mineral Resource estimates and ore Reserve estimates, all of which have been cross-referenced to previous market announcements by the Company. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements and in the case of estimates of Mineral Resources and Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed.

Thank you.

RESOURCE VALUE SPLIT

1. Mt Carrington gold equivalent ounces are estimated using long-term broker consensus estimates compiled by RFC Ambrian as at 20 March 2017 adjusted for recoveries derived from historical metallurgical testing work and calculated with the formula: $\text{Gold Equivalent} = 100 \times [(Au \text{ g/t} \times 1,227 \times 0.828) + (Ag \times 19.68 \times 0.84)] / (1,227 \times 0.828)$.
2. Red Mountain gold equivalent ounces are estimated using long-term broker consensus estimates compiled by RFC Ambrian as at 20 March 2017 adjusted for recoveries derived from historical metallurgical testing work and calculated with the formula: $\text{Gold Equivalent} = 100 \times [(Zn \times 2,206.7 \times 0.9) + (Pb \times 1,922 \times 0.75) + (Cu \times 6274 \times 0.70) + (Ag \times 19.68 \times 0.70) + (Au \text{ g/t} \times 1,227 \times 0.80)] / (1,227 \times 0.80)$.
White Rock is of the opinion that all elements included in the metal equivalent calculations have reasonable potential to be recovered and sold.

White Rock History

WRM's focus has been on the development of the Mt Carrington gold-silver resource in NSW and more recently the exploration of the high grade Red Mountain zinc-silver-lead-gold volcanogenic massive sulphide (VMS) deposits in Alaska.

Mt CARRINGTON KEY INVESTMENT HIGHLIGHTS

- ✓ **First-world jurisdiction:** located in New South Wales (“NSW”), Australia, which has a number of existing operating mines and development projects.
- ✓ **Brownfields Project:** historical mining occurred at the Project area by various companies up until 1990. On granted Mining Lease, 1st two gold pits already pre-stripped.
- ✓ **Significant infrastructure in place:** close proximity to major roads, railway, small towns, existing tailings storage facility with capacity for expansion, a freshwater dam, site exploration and mining office, an RO water treatment plant and connection to the NSW power grid.
- ✓ **Capital requirement reduced¹:** given the existing infrastructure, start-up capital is estimated at only A\$36m (inc. \$4M contingency) (on-site existing infrastructure estimated at A\$20m).
- ✓ **JORC Resources²:** 341,000oz contained gold (277,000oz at 1.4g/t in gold dominant deposits) and 23.2Moz of contained silver (22.8Moz at 57g/t in silver dominant deposits).
- ✓ **JORC Reserve²:** released in December 2017, a maiden JORC Reserve of 3.47mt @ 1.43g/t gold for 159,000 ounces has been defined in the first two gold deposits to be mined.
- ✓ **Positive PFS¹:** released in December 2017, and targeting an optimised mine plan focused on the Gold First stage initially, generating **free cash flow of A\$36m** and an **IRR of 34%**, over an initial 4 1/2 year mine life, with mining of the silver dominant deposits (8M ozs of silver already in the Indicated category) contemplated to follow for a further three years (estimated). Payback less than 2 years.
- ✓ **Favourable geology:** hosted in the Drake Volcanics in the New England Fold Belt. Mineralisation is typically hosted by stockwork-style quartz veining or disseminated sulphides, within silica-illite-pyrite alteration.
- ✓ **Upside potential:** near-mine and regional targets exist at the Project for both gold and silver complimenting the existing resource base, as well as for intrusive-related copper-gold porphyry systems. White Rock has a strategic 183km² land holding under EL surrounding the ML.
- ✓ **Strong fundamentals:** long-term gold price consensus of approximately A\$1,630/oz¹.

Mt Carrington Exploration - Copper

Key Evidence¹

- Old mine workings and drilling confirms shallow secondary Cu-Au 'leakage'....typically developed above primary copper deposits.
- Drilling confirms discrete high grade Cu – Au 'D' veins on structures....typically associated with upper levels of porphyry Cu systems.
- Strong surface Cu-Au and pathfinder geochemical anomalism.
- Mt Carrington is a very large Au-Ag-Cu alteration system.

Note the minimal historic drilling north, west and south of the main chargeability anomaly.

This drilling (3 holes) has defined a large zone of sulphide alteration that extends the system over 2km west of previous known limits, and to a depth of at least 800 metres¹.

Red Mountain Geology and Mineralisation

- World class deposits with similar siliciclastic felsic associations to the Bonnifield district include:-
Rio Tinto (Cu-Zn-Pb-Au-Ag; Spain),
Brunswick 12 (Zn-Pb-Ag; Canada) and
Eskay Creek (Au-Ag-Zn-Pb; Canada).
- Analysis of worldwide VMS deposits of this type indicate promising exploration potential for Red Mountain:-
The deposits nearly always occur in clusters
The presence and spatial relationships of the two separate deposits at Red Mountain may prove to be a significant exploration vector for discovery of further deposits.

Red Mountain – Regional Geology

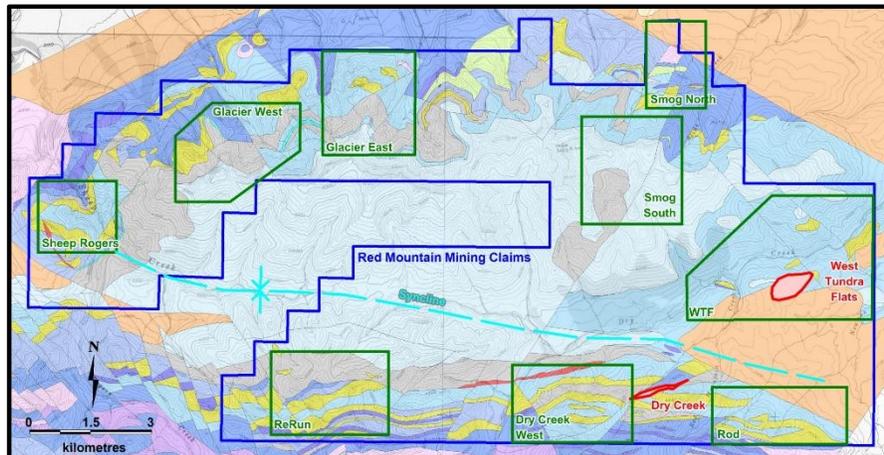

- White Rock Minerals has engaged world-renowned VMS expert, Dr. Jim Franklin, to assist with assessing the prospectivity of the district and targeting additional mineralisation.

Historic Work – Resource Potential
