

## ASX Release

### European Wins

24 October 2017

Envirosuite Limited (ASX:EVS) is pleased to advise that it has secured subscriptions with three new clients in Europe. All three subscriptions are for the Incident Intelligence solution which combines complaint reporting, a community involvement portal, workflow management, automated modelling and customised reports.

One of the subscriptions is for a client in Georgia, for use in a major hydropower construction project. The project has a high public profile in Georgia and includes commitments related to environmental monitoring which will require regular analysis, reporting and communication.

The Envirosuite solution will enable efficient and effective management of environmental inspections and community complaints and grievances on a daily basis, and will be embedded into the standard operating procedures for the organisation.

Envirosuite is well placed to assist developers and operators of major infrastructure projects to efficiently and effectively manage environmental issues, while working with community stakeholders to achieve optimal environment and productivity outcomes.

The other two subscriptions are for clients in France. One of these is a wastewater treatment facility, and one is for a waste management facility. Both businesses will use the market leading incident intelligence solution to analyse, track and manage odour investigations and complaints and have been secured through Envirosuite's partner Odournet.

CEO, Mr Peter White commented that,

*"These wins demonstrates our broadening geographic reach across the European continent and reflects increasingly stringent environmental regulation by governments driven by a rising tide of expectation amongst community stakeholders and non-government organisations globally. It is pleasing to see that our partners are becoming more independent in the sales process and are targeting their own clients with the Envirosuite solution".*
